Allowable Subject Matter

1. The indicated allowability of claims 14 and 15 is withdrawn in view of the newly discovered reference(s) to Hershey (US 6,239,928 B1). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Hershey (US 6,329,928 B1).

Regarding claim 14, Hershey discloses an electromagnetic field system, comprising: a structure including an electrically conductive grid array having a grid opening size (building frame 10); and means for generating a quasi-static non-propagating electromagnetic field within said structure by feeding a frequency signal into said electrically conductive grid array (Col. 3 lines 40-57); wherein the frequency of said frequency signal is selected such that the dimension of the grid opening size is small relative to the wavelength of said frequency signal. (Col. 4 lines 17-30)

Regarding claim 15, Hershey discloses a system wherein the frequency of said frequency signal is selected such that the wavelength is greater than twice the dimension of the grid opening size. (Col. 4 lines 17-30)

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nealy (US 5,926,137) also shows a conductive grid array that for creating a magnetic field with a frequency signal wherein the opening size of the grid is small compared to wavelength.
